

Physical Conditions

If the state of Florida allowed cameras on our tablets to take and send pictures/videos, there would be a lot of Lock downs. The Black mold in showers, day areas and cells; the windows that don't close (shut). In the winter months inmates are freezing especially at Florida State Prison.

It's a easy fix with the showers. Have the Houseman spray down the showers with mold remover at night when they're not in use, and have an officer supervise, that way the house man won't get any bright ideas about putting the mold remover on sale to other inmates.
